

Business SIP Direct Routing Trunks for Microsoft Teams

Many business are turning to Microsoft Teams for unified communications and collaboration between their employees. With Granite's Teams Direct Routing solution, you can consolidate services, decrease overhead, and extend the Teams experience to include inbound and outbound calls between Microsoft phone systems and your calling devices.

Microsoft Teams Direct Routing

Employing Granite's Business SIP trunking, Direct Routing (DR) allows interconnection of the PSTN with your Microsoft cloud-based phone system, facilitating calls between Teams users and mobile or fixed line telephone subscribers anywhere in the world.

Complex configuration and inherent networking issues can cause implementation challenges and security risks when connecting Microsoft Teams with a service provider's PSTN network. Microsoft certified for direct routing with the Teams phone system, Granite's Perimeta Session Border Controller (SBC) eliminates these issues and provides a robust, scalable and flexible solution for deploying Business SIP trunking.

Benefits

- **No Up-front Investment** - Zero need for dated equipment makes on-boarding our solution a low-risk, high-gain opportunity
- **On-demand Scalability** - Easily increase or trunks depending on your business needs
- **Single DID for Every User**
- **Can be combined with Calling Plans**
- **Less Hardware Footprint** - No need for purchasing, maintaining and hosting SBCs
- **Easy Deployment** - Unlike traditional on-premise systems, your Granite Business SIP Direct Routing Trunks can be up and running within days, not months. And with no need for bulky on-site equipment, your transition to the cloud is seamless

The Granite Voice Advantage
